C62 valves are recommended for Hydra-Cell models D04, D10, D12, and D15/D17.

C63 valves are recommended for Hydra-Cell model H25.

C64 valves are recommended for Hydra-Cell model D35.

The model C62 seal-less valve is the most frequently specified pressure regulating valve in a Hydra-Cell pumping system.

## Identifying Metallic Components

Since it is often difficult to distinguish between metallic materials used, identification marks have been added to several machined metallic components of Hydra-Cell pumps and valves.

### Plunger (C22/C23/C24 Valves)

Identified by ridges (or no ridges) around the tapered end.

17-4 SST	2 ridges
316L SST	1 ridge
Hastelloy C	No ridges

### Plunger Seat (C22/C23/C24 Valves)

Identified by circular V-shaped grooves (or no grooves) on one face.

17-4 SST	2 grooves
316L SST	1 groove
Hastelloy C	No groove

## Installation Guidelines

Hydra-Cell C Series pressure regulating valves are installed on the discharge side of the pump to regulate the pressure of downstream process or equipment.

### Pressure Regulator (Relief Valve)

#### Guidelines

1. Size the pressure regulator valve so that when fully open, it will be large enough to relieve the full capacity of the pump without excessive over-pressurizing of the system.
2. Locate the valve as close to the pump as possible and ahead of any other valves.
3. Adjust the pressure regulating valve to no more than 10% over the maximum working pressure of the system. Do not exceed the manufacturer's pressure rating for the pump and/or regulator.
